DESIGNING INNOVATIVE SOLUTIONS

AIR CONDITIONING AND HEATING SOLUTIONS

# EFFICIENCY **OR** ADAPTABILITY?

AQUASNAP<sup>®</sup> WITH GREENSPEED<sup>®</sup> INTELLIGENCE,  
BECAUSE YOU SHOULD NOT HAVE TO CHOOSE.

- Large operating map
- Energy savings
- Advanced control
- A plug and play solution
- Simplified maintenance
- Perfect integration
- Ecodesign compliant

Since Willis Carrier developed the world's first modern air conditioning system in 1902, Carrier's engineering teams have been designing advanced solutions for your business. And because you should not have to choose between efficiency and adaptability, Carrier incorporated the performance and the simplicity of the AquaSnap range with the smartest innovative technology: Greenspeed intelligence.

Committed to performance, the AquaSnap 30RBV and 30RQV units offer a large operating map and energy savings: new generation of hydronic control, NHC, insures the energy efficiency optimization.

Fast to install, due to fully integrated options, the units are also easy to maintain: the control system stores all operating data and offers specific access levels to quickly provide the requested information.

The 30RBV and 30RQV units perfectly meet the thermal needs of residential and small commercial buildings.
